

Can I have a Crimsafe security door with a pet door?

A pet may be an important member of your family and pet door access into your home may be a feature you currently enjoy. While a pet door can be inserted into any security door, including Crimsafe security doors, it is important to be aware that **it will compromise the security level of the finished product.**

4 Reasons why pet doors compromise your security

1. Large pet doors may allow an intruder to enter through the pet door opening
2. Small pet doors may allow a small child to gain access and throw the locking mechanism
3. Pet doors can weaken the mesh
4. No claim is made that the advertised level of strength will apply to a Crimsafe security door with a pet door installed

I understand the risks but I really want a pet door installed into my security door

Some Authorised Crimsafe Licensees may agree to install a pet door into a Crimsafe security door for you.

Each Authorised Crimsafe Licensee operates their business independently and your agreement with your Authorised Crimsafe Licensee to install a pet door into your security product does not constitute approval from Crimsafe Security Systems.

A pet door installed into a Crimsafe security door is not covered under the Crimsafe warranty that applies to the rest of your door.

Please ensure you ask your Crimsafe Licensee questions regarding the installation to make sure you will be satisfied with the outcome, before proceeding with your order.
