SHUTTERS

PVC shutters have significantly increased in popularity over the last few years. With competitive pricing, durability and versatility, PVC Shutters are hard to beat for all internal applications.

Aluminium core strength

While extruded PVC components are strong to start with, hollow components have added rigidity in the form of Aluminium reinforcing. All louvres and stiles, as well as some rails, are supplied with this reinforcing, to ensure your PVC panels remain structurally sound for years to come.

7 year warranty

Supplied with a 7 year warranty, you will have complete peace of mind and comfort in your PVC shutters, enjoying the privacy and light control that shutters offer, while being confident in the quality of the product.

Excellent thermal resistance

Due to the construction of the components, PVC Shutters have a high factor of thermal resistance. This thermal resistance is in large part thanks to the hollows in each panel. Having an air gap internally assists in preventing heat transference through the panel and into the home.

Perfect for indoor wet areas

Being made from a material that is not susceptible to moisture is a huge benefit of PVC shutters. They are the perfect choice for bathroom, laundry or kitchen installations because they are not affected by splashes of water or steam and can be supplied with Stainless Steel hinges to avoid any possibility of corrosion or rust caused by moisture.

No cupping, twisting or warping

Extruded into the finished profiles and containing no timber, this product is extremely durable as it is not subject to the cupping, twisting or warping that is inherent in timber products.

Versatile installation options

With the large range of louvre, frame and post types, PVC Shutters are suitable for any window or door opening in the home. Track Bi-fold or Track Sliding applications have been designed to make covering large sliding doors a breeze; while Bay and Corner posts can be added, to cater to those hard to fit windows.
